Md Tahseen Alam

Full Stack Developer

Portfolio | GitHub | LinkedIn | LeetCode | tassutahsee@gmail.com | +91-9117391745 | India

Education

Global Institute of Technology — Jaipur
B.Tech in Computer Science and Engineering — *2022 – 2026*

Jamia Polytechnic — Akkalkuwa
Diploma in Computer Science and Engineering — *2019 – 2022*

Experience

Texura — Oct 2025 – Jan 2026
Full Stack Developer Intern — *React, Node.js, Express.js, MongoDB, JWT, Razorpay, Cloudinary*

- Built a multi-restaurant ordering platform with separate Super Admin, Restaurant Owner, and Customer workflows for restaurant onboarding, table booking, menu management, and order placement.
- Developed 35 Express.js route definitions backed by 7 MongoDB models, implementing JWT authentication and role-based middleware, with owner data scoped to the restaurant ID in the token.
- Implemented server-side order-status transitions and Socket.IO events for new orders and status updates.
- Integrated Cloudinary image uploads and a Razorpay (test mode) checkout flow with HMAC-SHA256 payment-signature verification.

Learn & Build — Aug 2023 – Sep 2023
Cloud & DevOps Intern — *Docker, Git, CI/CD, AWS*

- Containerized backend services using Docker and worked with container-based development workflows.
- Gained hands-on exposure to AWS by working with EC2 for application deployment and S3 for cloud-based object storage.
- Worked with Git branching, pull-request workflows, and CI/CD processes to support collaborative development and deployment.

Projects

EduManage — Multi-Tenant School Management Platform — Live | GitHub
React, Node.js, Express.js, MongoDB, JWT, Socket.IO, OpenRouter, AWS EC2

- Built five role-based dashboards (Super Admin, School Admin, Teacher, Student, Parent) covering attendance, homework, exams, grading, timetables, and messaging; seeded with a demo dataset of 10 schools and 1,600 students.
- Developed 80 backend API route definitions (75 distinct URL paths) backed by 10 MongoDB models.
- Enforced access control with JWT verification, role-based authorization, and a database check on each protected request that rejects deleted accounts; scoped records by school in a shared database and restricted teachers to students in their own classrooms.
- Added Socket.IO real-time messaging and an OpenRouter AI tutor with a fallback model; deployed the backend on AWS EC2, frontend on Vercel, and database on MongoDB Atlas.

MockMate — AI Mock Interview Platform — Live | GitHub
React, Node.js, Express.js, MongoDB, JWT, Redis, BullMQ, SSE, OpenRouter

- Built an interview app that parses an uploaded PDF resume (Multer, pdf-parse) to run an eight-question, role-specific interview, with interview and conversation state stored in MongoDB.
- Streamed interviewer responses incrementally to the browser using Server-Sent Events.
- Moved report generation off the request path using BullMQ, Redis, and a separate worker (3 attempts, exponential backoff from 5 seconds, concurrency of 3); the frontend polls every 3 seconds until the report, with an overall score and four category scores, is ready.

Technical Skills

Languages: JavaScript, TypeScript, C++, Python
Frontend: React.js, Next.js, Tailwind CSS
Backend & APIs: Node.js, Express.js, REST APIs, JWT, RBAC, Socket.IO, Server-Sent Events
Databases & Async: MongoDB, Mongoose, PostgreSQL, Redis, BullMQ
Tools & Deployment: Git, GitHub, Docker, AWS EC2, Vercel, Render, Cloudinary, Multer, OpenRouter

Achievements

- Solved 350+ DSA problems on LeetCode and other problem-solving platforms.
