

Md Tahseen Alam

Full Stack Developer

+91-9117391745 tassutahsee@gmail.com | Portfolio | GitHub | LinkedIn | LeetCode

Summary

Full Stack Developer with hands-on experience independently designing and building end-to-end web applications across frontend, backend, databases, authentication, real-time systems, and AI integrations. Strong in React.js, Next.js, TypeScript, Node.js, Express.js, MongoDB, and PostgreSQL, with practical experience designing multi-tenant architectures and deploying full-stack applications. Solved 300+ Data Structures and Algorithms problems.

Technical Skills

Languages: JavaScript, TypeScript, Python, C++

Frontend: React.js, Next.js, Redux, Tailwind CSS, HTML5

Backend: Node.js, Express.js, REST APIs, JWT, RBAC, Socket.IO, Redis, BullMQ

Databases: MongoDB, Mongoose, PostgreSQL, Database Design, Schema Design

Architecture: Multi-Tenant Systems, Authentication, Authorization, API Design, Middleware, MVC

Cloud & DevOps: Docker, Git, GitHub, CI/CD, AWS (EC2, S3, CloudFront), Vercel

AI & Integrations: OpenRouter API, Google OAuth, NextAuth, Cloudinary, Multer, Postman

Experience

Full Stack Developer Intern

Oct 2025 – Jan 2026

Texura (Remote)

MERN Stack, REST APIs, JWT, Cloudinary

- Independently developed a restaurant management platform around core operational workflows including table booking, online ordering, menu management, and administration.
- Structured the application around 3 distinct user roles, creating role-specific workflows and access boundaries across customer, restaurant staff, and administrator experiences.
- Designed and integrated 15+ RESTful APIs covering authentication, restaurants, menus, tables, bookings, orders, and user workflows with MongoDB-backed persistence.
- Connected frontend workflows with JWT-based authentication and backend authorization middleware to enforce protected resources consistently across the application.
- Integrated payment and media workflows through Razorpay test-mode payments and cloud-based image storage, completing the core application flow from user interaction to backend processing.

Cloud & DevOps Intern

Aug 2023 – Sep 2023

Learn & Build (Remote)

Docker, Git, CI/CD, AWS

- Containerized backend services with Docker to standardize application environments and make deployments reproducible across development and deployment workflows.
- Established Git branching and pull-request workflows to organize collaborative development and maintain consistent version control practices.
- Built CI/CD pipelines connecting source changes with automated deployments through AWS EC2 and S3.
- Deployed and monitored applications while working with cloud infrastructure, containerization, and automated delivery workflows.

Projects

EduManage | GitHub

React, Node.js, Express.js, MongoDB, Socket.IO, OpenRouter

- Architected and developed an end-to-end multi-tenant school management platform, separating school data while supporting independent academic workflows within a shared application.
- Designed 5 role-specific experiences for Super Admin, School Admin, Teacher, Student, and Parent, with separate dashboards and permission boundaries aligned to each workflow.
- Structured the backend around modular REST APIs and MongoDB data models covering attendance, examinations, report cards, timetables, homework, classrooms, grades, users, and academic operations.
- Designed a layered authorization model combining JWT authentication, RBAC, middleware validation, and school-level resource checks across 4 school organizations and 35+ role-based accounts.
- Added real-time communication through Socket.IO and AI-assisted learning workflows through OpenRouter, enabling an AI tutor, student performance insights, and personalized learning suggestions.
- Designed reusable data and file workflows so shared academic resources could move from user-facing interfaces through backend processing into persistent cloud-backed storage.

- Designed and developed an end-to-end AI document-generation platform that turns structured user requirements into editable, exportable professional documents.
- Built the application around reusable generation workflows, supporting 5 purpose-specific templates while keeping document configuration, AI generation, and presentation separated.
- Designed server-side generation flows using Next.js API routes and OpenRouter, with configurable prompts, document requirements, tone, formatting, and token-aware controls.
- Created an authenticated document workspace using Google OAuth, NextAuth, and MongoDB/Mongoose persistence for user accounts, generated documents, and application state.
- Connected the generated document model to PDF and DOCX export pipelines, allowing users to move from generation to downloadable output within the same application.

Achievements

- Solved 300+ Data Structures and Algorithms problems across LeetCode and other coding platforms.
- Branch Topper in Diploma in Computer Science Engineering.

Education

B.Tech in Computer Science & Engineering <i>Global Institute of Technology, Jaipur</i>	2022 – 2026
Diploma in Computer Science Engineering — 82.17% <i>Jamia Polytechnic, Akkalkuwa</i>	2019 – 2022
