Profile

Full Stack Developer who builds complete web systems across React/Next.js and Node.js, with deeper strength in backend architecture, authentication, authorization, data modeling, real-time communication, asynchronous processing, and cloud deployment. Experienced in taking applications from requirements and system design through implementation, security, integration, and deployment.

Selected Engineering Work

EduManage

Live GitHub

React, Node.js, Express.js, MongoDB, JWT, RBAC, Socket.IO, OpenRouter, AWS EC2

- Designed and built a multi-school management platform with role-specific workflows for Super Admin, School Admin, Teacher, Student, and Parent.
- Designed the access-control model using JWT authentication, bcrypt, RBAC, and school-context validation so protected resources remain isolated across schools and roles.
- Built frontend and backend workflows around REST APIs and MongoDB data models covering academic, attendance, examination, timetable, homework, grading, submission, and messaging functionality.
- Added real-time messaging and AI interactions with Socket.IO, persisted conversation history and configurable AI services through OpenRouter; deployed the backend on AWS EC2.

MockMate

Live GitHub

React, Node.js, Express.js, MongoDB, Redis, BullMQ, SSE, OpenRouter

- Built an AI-powered mock interview platform where uploaded resumes are processed to generate role-specific interviews and structured feedback.
- Implemented Server-Sent Events to stream AI interviewer responses while maintaining persistent interview and conversation state in MongoDB.
- Separated long-running report generation from the API request-response path using BullMQ, Redis-backed job queues, and a dedicated worker process with retry handling.
- Implemented JWT authentication and server-side resume processing using Multer and PDF parsing, connecting uploaded resume data to the interview generation workflow.

Professional Experience

Texura

Full Stack Developer Intern

Node.js, Express.js, REST APIs, JWT, Cloudinary

- Developed application functionality for a restaurant management platform covering authentication, restaurant and menu management, table availability, bookings, ordering, and administrative workflows.
- Designed and integrated REST APIs for core restaurant workflows, implementing JWT-based authentication and role-based access control for protected operations.
- Worked across frontend and backend application flows, connecting role-specific interfaces with backend services and data.
- Integrated Cloudinary for application media handling and supported development of the platform's operational workflows.

Learn & Build

Cloud & DevOps Intern

Docker, Git, CI/CD, AWS

- Containerized backend services using Docker and worked with container-based development workflows.
- Gained hands-on exposure to AWS by working with EC2 for application deployment and S3 for cloud-based object storage.
- Worked with Git branching, pull-request workflows, and CI/CD processes to support collaborative development and deployment.

Engineering Toolkit

Languages: JavaScript, TypeScript, C++, Python

Frontend: React.js, Next.js, Tailwind CSS

Backend & APIs: Node.js, Express.js, REST APIs, JWT, RBAC, Socket.IO, Server-Sent Events

Data & Async: MongoDB, Mongoose, PostgreSQL, Redis, BullMQ, Database Design

Cloud & Integrations: AWS EC2, Docker, Git, GitHub, Vercel, Render, OpenRouter, Cloudinary, Multer

Problem Solving

350+ DSA Problems

LeetCode & other problem-solving platforms

Education

B.Tech in Computer Science and Engineering

2022–2026

Global Institute of Technology, Jaipur

Diploma in Computer Science and Engineering

2019–2022

Jamia Polytechnic, Akkalkuwa
